U-CLICK TIMEPIECES WRIST-SIZE TOOL

## U-CLICK TIMEPIECES WRIST-SIZE TOOL

**How to use our wrist-sizing tool:** Simply download and print our wrist-sizing tool. To ensure the wrist sizing tool is printed out to scale, before printing, make sure the page "SCALE" option is set to "100%" in the printer options dialog box- see sample picture on our website. The U-CLICK TIMEPIECES WRIST-SIZING TOOL must be printed on standard full-size letter paper (8 inches x 11 inches). Once you have printed it out, you can use the guide below to ensure it has been printed correctly & accurately.

Then, cut it out, and VOILA! You have a quick and easy way to measure your wrist size. Follow the instructions included in the wrist-sizing tool and make a note of your wrist size.

To ensure the watch fits comfortably, make sure not to wrap it around your wrist too tightly. To ensure the watch does not fit too loosely, make sure not to wrap it around your wrist too loosely. You can then add or subtract 1/8" to 1/4" according to whether you prefer a loose, exact, or tight fit.

**Note:** We recommend that you size your watch to a comfortable, yet not too loose or too tight size. If worn too loose, (especially watches with a larger or heavier case), you may risk having the watch spin around on your wrist, or risk accidentally hitting and breaking the crystal. If worn too tightly, you will put stress on the pins that hold the watch-bracelet together, and will cause the watch-bracelet to get "stretch" more quickly.
